

ANCILLARY TABLES FOR “THE HARMONIC SHEET”

ALEXANDER WEST TEMPLETON

Companion to Appendix A of the paper. $k = \mathbb{F}_{13}[a]/(a^6 + 12a^5 + 10a^4 + 10a^3 + a^2 + 5a + 4)$; $H'(\tau, U) = U^{23} + \sum c_{i,j} \tau^j U^{23-i} \in k[\tau][U]$ is the minimal polynomial of the normalized low-pole coordinate u' over $k(\tau)$ (Lemma 4.3 of the paper), with $1 \leq j \leq \lfloor 5i/23 \rfloor$. Source: `hprime-canon.txt` (SHA-256 prefix `14bc240d`), obtained by the series solve `m13a-canon.gp` and by the elimination `elim.H.sing`; the two agree in all 49 coefficients.
